Princeton Plasma Physics Laboratory: Forging Partnerships

PRINCETON UNIVERSITY

Winter 2013

A message from Princeton Plasma Physics Laboratory Director Stewart Prager

I am delighted to welcome you to the very first edition of the PPPL News. This new quarterly e-newsletter will inform PPPL's friends and neighbors about some of the many exciting research projects and public events taking place at the Laboratory – a world-leading center of research in plasma physics and fusion energy. The theme of this issue is "partnerships." Our scientific research is broad – we reach for the stars as we explore the future of magnetic fusion, the same process that powers the sun. Our partnerships with leading scientists are also far-reaching. They range from our partnerships with our neighbors in the local communities that surround us here in New Jersey, through our outreach activities, to our research collaborations that extend across the U.S. and over the Atlantic and Pacific oceans. I hope you will take the time to learn more about the stories highlighted in this debut publication. - *Stewart C. Prager*

Our Team

PPPL News is published quarterly by the Princeton Plasma Physics Laboratory [Office of Communications](#).
